

SpiraLift

Spiral Support

Every spiral duct shop should have one, even two!

The new **SpiraLift** Duct Table is now available for sheet metal shops to move, install and load their spiral products with ease, and in most cases requiring only one person for larger duct handling. One worker can easily handle duct as large as 36"+ to move, install flanges, cut take-offs or holes into duct while working in an ergonomic position with less fatigue. **SpiraLift** keeps your spiral duct horizontal and well supported at various levels, so operator can work at an ideal height. Spiral can be rolled easily so attaching flanges or rings can be installed without the operator moving or struggling to manipulate the duct into position. The **SpiraLift** is also a great tool for jobsite staging area!

Preparation of duct and moving it to where it is to be installed is a time saver; allowing one worker to do the job of two! Whether you manufacture spiral duct and/or install it, **SpiraLift** will save time and money on the shop floor or on your jobsite. This machine is constructed from heavy duty tube steel and is built to last; lifting spiral duct up to 500 lbs. and 10 feet long. All terrain wheels are an option for rough floors and/or jobsite. Manual hydraulic lifting mechanism allows total freedom. **SideLiner** is a part of our **Double Wall Spiral Assembly System**, and is now available as a stand alone time saving unit for general spiral duct handling.

Put **SpiraLift** to work in your shop or on your jobsite, today!
